

Create and access audit reports
instantly from anywhere!

ChartVerify® allows providers to conduct documentation audits to support technical and medical necessity compliance. ChartVerify® was designed to assist compliance officers, risk managers, and auditors in implementing audit plans while reducing the administrative burden of handling meaningful and accurate reports upon completion of a documentation audit. When the audit is done, the report is instantly available.

Why Use ChartVerify®?

Merely conducting technical documentation audits places providers at risk. ChartVerify's Reports functionality assists with demonstrating the effectiveness of your audit program and training with trending analysis over time.

What is ChartVerify®?

- A cloud-based documentation software that is easily integrated into a provider's documentation audit plan.
- Allows multiple user access points through the role and access-based logic set up within the company profile.
- Allows for auditing of technical requirements and medical necessity supportive documentation.
- Quarterly downloadable reports assist compliance officers and auditors in identifying payment risks and driving training focus areas while laying the foundation of an effective compliance audit program.
